Many for  
**R-410A**

Sporlan has the right solenoid for the job, with a complete line of normally-open or normally-closed valves; each with a full range of voltages and frequencies. The proven synthetic materials ensure precise control and lasting tightness, reducing the risk of refrigerant leaks. The robust well qualified design can be used on R-410A applications with minor modifications to internal parts. Look for the -HP after the nomenclature.
