

SLS and SLES

(18 May 2025)

I had a chance to read an article which told Me about hazardous of SLS and SLES once before 2022. At that time, King Charles has not gotten skin cancer and I was not interested in the article, so I unthoroughly read it.

Whereas, on 18 May 2025 in the morning, Daddy Jamnong sent the article to Me by Line Application. And I felt interested in the article so much. So, I intentionally read the article.

I summarized what the article told readers;

“If you love to use liquid soap for having a shower or for taking a bath, you should read this article;

Liquid soaps are more chosen because of comfortable.

But ***did you know that liquid soaps which we use in our daily lives are not soap but they are all chemicals. They have ingredients of cleaner products including bathroom cleaners and toilet cleaners?***

Liquid soaps do not urgently affect to our health but they are collected to be long-term problems because SLS (Sodium Lauryl Sulfate) and SLES (Sodium Laureth Sulfate) are infiltrated into our skins, our inner organs, and our bloods every time we have a shower or take a bath. SLS or Sodium Lauryl Sulfate is an example of main harmful chemicals in liquid soaps and it is easy and fast to absorb through our skins. It can be collected in our eyes, our brains, our hearts, and our livers, and causes long-term problems especially when it is used with Amines”

After I had read the article, I doubted “Do My liquid soaps have SLS and/or SLES?”, so I took many bottles of My liquid soaps to read their labels. And ***the cruel truths are that My all foreign liquid soaps have SLS or SLES. And although SLES is a little tenderer than SLS, there are researches that told everyone “A process to produce SLES may cause hazardous residue such as 1,4-Dioxane which can cause cancers!”***

2 of My all foreign liquid soaps are British brands. One of them is a product ***for babies***. And another brand is best seller in Italy. The brand that is best seller in Italy has a certify “Dermatologically Tested” which I doubted “What laboratory tested?”. Almighty or Allah told Me “Angie, ***the certify makes consumers trust and helps the products to be easy to sell!***”

I know that Ratchaneewan Ad-harn and Pongthep Ad-harn who are doctors have much knowledges of body systems of humans but they do not have much knowledges of chemicals. So, *a main instigator who orders the orders to put SLS and SLES into foreign personal care products is “prostitute princess Chulabhorn Walailak” who is a scientist.*

Almighty supported the truth I had found because after I had thought that prostitute princess Chulabhorn Walailak is a scientist, Almighty or Allah quickly told Me “Angie, *prostitute princess Chulabhorn Walailak knows chemical formulars of many chemicals and she knows how each chemical works!*”

I strongly believe that *her motivation to order the orders is that she does not want to confess that she is screw such as she had sex with crown prince Vajiralongkorn who is her own older brother and conceived prostitute princess Siribhachudhabhorn with crown prince Vajiralongkorn!*

A noticeable truth is that My Thai liquid soap which produces and sells in Thailand *does not have* SLS or SLES. But Almighty or Allah told Me “Angie, *they have ordered these orders for a long time, not after You declared “I will not use personal care products which are Thai brands and/or made in Thailand!”*”

By the way, Almighty or Allah also told Me “Angie, I know every thought of each man in every minute” And “Angie, *there are foreign people whose natures are the same as all Thai people, in companies that produce foreign liquid soaps and foreign personal care products!*”
