

The name of the hormone I take is ...

After I had known that Prince William of The British Monarchy is My Real Soulmate not so long, My Mom heard something. Therefore, My Mom requested Doctor Tanita to order “Depakin” which is a medicine to prevent patients from epileptic conditions for Me.

After I had taken the medicine around 2 – 3 months, I had some odd conditions. So, I questioned My Mom “Mommy, does the medicine the doctor ordered Me to take newly has any hormones like a feminine hormone? After I have taken the medicine not many months, why I want to be beautiful, buy new clothes, and dress up beautifully?”

At that time, the face of My Mom showed her puzzle, but she answered Me “The medicine does not have any hormones. The medicine is just a medicine to prevent patients from epileptic conditions!”

The Father Almighty told Me many years later “Angie, the name of the hormone is “William Wales” 😊😊😊😊😊😊”
