Chromogenic Media

Features

- Simple: Most can be used without autoclaving
- Specific: The target colony is bright in color and easy to identify
- Reliable: Verified by a large number of isolates, the coincidence rate is high
- Fast: The fastest detection time is 24h
- Savings: The processing and testing of large batches of samples can reduce the time and cost of supplemental biochemical tests

Three major advantages

- Selected high-quality raw materials: core raw materials, stable quality, small batch to batch difference, and excellent performance
- Strict quality control: from raw materials to final products, the whole process is strictly monitored, so as to achieve quality traceability and ensure the stable quality of finished products between batches
- International high-quality chromogenic medium: high sensitivity, high specificity, bright color of colonies, easy to identify

LB Dehydrated Culture Media

LB Broth

Usage: Suspend 25.0 g in 1 L of purified water. Heat with frequent agitation and boil to completely dissolve the powder. Autoclave at 121 °C for 20 minutes. The media is used for the preservation and cultivation of Escherichia coli in molecular biology experiments. (Molecular Cloning: A Laboratory Manual 4th Edition)

Principle: Tryptone and Yeast Extract provide nitrogen sources, vitamins and growth factors. Sodium chloride maintains a balanced osmotic pressure.

LB Agar

Usage: Suspend 40.0 g in 1 L of purified water. Heat with frequent agitation and boil to completely dissolve the powder. Autoclave at 121 °C for 20 minutes. The media is used for the cultivation of Escherichia coli in molecular biology experiments. (Molecular Cloning: A Laboratory Manual 4th Edition)

Principle: Tryptone and Yeast Extract provide nitrogen sources, vitamins and growth factors. Sodium chloride maintains a balanced osmotic pressure. Agar is the coagulant of the medium.
