### The secret

New filter with nanofibres

กรองได้สูงถึง  
**5-8 ไมครอน**

NanoFiber models.

Manual and automatic models

anoFiber Manual  
filter is cleaned by manually turning it using the selector

If there is a manual selector valve, the filter is cleaned by pressing the button on top of

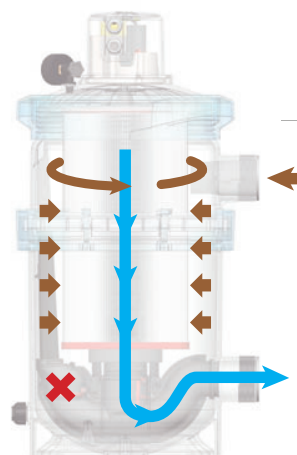

If there is an automatic selector valve, the filter is cleaned automatically

### Self-cleaning filter

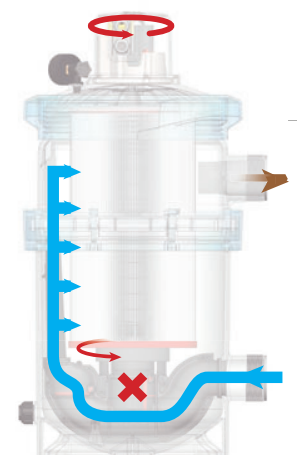

Filters reinvented

The shower starts to work in the backwashing position. In order to ensure the filter medium is properly backwashed, turn the lever on top of the filter.

The lever on top of the filter works manually automatically depending on the NanoFiber chosen. By turning the lever in either manual automatic mode, the filter medium also turns, which ensures a thorough backwash.
